Persons doing this trying to build support over back channels and overtly for their cause . They are zealots and murders who are trying to coup with neurotech and advanced systems such as celldar from roke . Other hacking tools and spy devices . Other surveillance tools and assets and other advanced systems . Take seriously . They use robots to build support in other units or to cause arguments or make people "follow the leader " . They can take control of a person - can't tell difference without advanced sensors

Sos sos sos - persons trying to hack nsa - persons using "robot tech " on nsa persons to make them do things against their will in their office - persons have system admin access - persons affect their memory afterward or keep them as a " robot "

You

2023/2/23 2:08 AM

Pentagon insecure from tech - sensors insufficient . Some signatures very local , some wide/longer range . Supposedly you can put field over whole area and then when electromagnetic energy goes through it changes the field and you can detect all of it .

Persons in special access program make coders look at source code then persons in special access program watch/record out of eyes to steal source code - this is how they update hacking tools . (Besides using neurotech on coders against their will to force them to help)

Persons used deepfake technology on the "voice to skull " to trick Martin for some of these tips . Persons also used the system on him to write them "precision control of hands "

Persons are animating his face using remote long range neueotech - meaning persons are moving his facial muscles to make it appear he is lifelike and to talk out of his voice . Persons are keeping him comatose with a directed energy pulse to an inhibitory portion of his brain nonstop - persons in the program are typing this message by moving his hands - this is a real tip and not fake - this is urgent - the orcon special access program refuses to turn off the "body synchronization " mode - persons are trying to slow kill and torture mr.seidel while they talk out of his voice and pretend to be him - this is the truth -

Persons are using the tech on the precentral gyrus to move and contest his hands and the m1 motor cortex .

Persons are using the emf on the laryngeal motor cortex to make him talk out of his voice .

Persons are stimulating the frontal eye field to move his eyes against this will .

This is being done to animate and impersonate him

Via long range - long range emf aimed precisely onto the brain to synthetically fire the neurons.

The technology allows for the correct action potentials to be transmitted down the corticospinal tract with the correct amplitudes ,waveforms and intensity and sequences to manipulate the muscles and contract the muscles in any magnitude and direction for any muscle or groups of muscles in sequence . To do any action - including walking , talking , moving the hands in any type of movement , moving the facial muscles , eye muscles , tongue , or any muscle or groups of muscles independently or in synchronization at any magnitude in the correct degree of freedom along the joints .Meaning any muscle or muscle groups can be remotely fired to make a person take any anatomical position that is allowed by joint. Any group of muscle agonist and antagonists can be fired correctly to perform any normal anatomical movement - all of this is because the motor cortex has been mapped precisely and can be tracked on the move by the classified direct energy aiming system . The system has stored in the software source code (and can also translativ movement mode from one person to another - where it tracks the persons who is operating and controlling the software movement and the software program creates the correct pulse locations , pulse flux , pulse width and pulse length of electromagnetic flux to cause induction currents and synthetic actions potentials in the cortical columns of the motor cortex (and the correct sequences for multiple locations) to get the correct muscles to contract at low latency in the correct order) this system has stored the correct motor cortex remote firing algorithms to synthetically fire the motor cortex in the correct regions and magnitudes to recreate and translate movements from the software onto the target - even if the person is on the move - this system is a classified top secret system .
