NCIS

Thank you for submitting your tip to Naval Criminal Investigative Service. NCIS has purview over criminal offences which concern US Navy and US Marine Corps assets, installations and civilian personnel. NCIS will forward your tip to the appropriate office for review and action deemed necessary. If this is an emergency please call 911 or your local police department.

Please see tipnsent to Dallas police -34181

Please share with fbi so they can finally understand what is going on with this system permanently

Inducing depolarization in a neuron or a nerve bundle through an electromagnetic field involves the manipulation of the electric potential across the neuron's cell membrane. This process can be achieved through various mechanisms, with the primary ones being the application of electric fields or magnetic fields.

Electric Field Stimulation: When an electric field is applied to a neuron, it exerts a force on the charged particles within the cell membrane. If the field is of sufficient strength, it can disrupt the voltage difference across the cell membrane, leading to depolarization. This depolarization can trigger an action potential if the threshold is reached

. Magnetic Field Induction: According to the principles of electromagnetic induction, a changing magnetic field can create an electric field. When an external magnetic field is applied to a neuron, it induces electric currents within the tissue. These induced currents can alter the transmembrane potential, potentially leading to depolarization and subsequent firing of the neuron.

Advanced satellite-based systems can generate highly focused electromagnetic beams with very small beam angles. This precision is crucial to ensure that the electromagnetic energy is directed only at the specific neurons or nerve bundles intended for stimulation. Which lead to the depolarization of neurons caused by induced currents from a time altered electromagnetic flux.

Persons in special access program have the ability to aim and target specific regions of the brain on the move using electromagnetic waves and beams. The system allows for the precise tracking of the brain and specific regions of the brain on the move in real time. This includes the motor cortex of the brain. The system uses backscatter of electromagnetic waves aimed at the brain to pick out landmarked features of the brain so it can update the real time location of the brain.

The system is able to target the motor cortex on the move even at high speeds - the system allows for the precise targeting of the homolocus of the motor cortex and has it mapped precisely for each subject - meaning the software builds a custom relative location map (so that it can aim the correct electromagnetic waves at the correct portion of the brain for a person)

The system has stored the relative locations of the regions of the motor cortex for each muscle. The software and the integrated components(phased arrays and the receivers) aim at the brain in real

time a set of pulses electromagnetic waves that serve as the tracking guide - when these electromagnetic waves reflect off the brain back to the receiver the software uses advanced mathematics and a triangulation of the person to update the real time location of the persons body and the distance to every single brain region based off the landmarking feature(it knows the location of key regions of brain based of unique electromagnetic returns (unique phase , intensity and polarization of the backscatter) - it uses the polarization , phase and intensity (from atenuation) and the time it takes to the set of receiver arrays to update the location of the subject(in this case martin) and the location of the other regions of the brain - so that it always tracks and has stored in the software the location of every region of the brain at once.

This allows the software and the operators to find and target and aim at the correct region of the brain at once with induction currents. Meaning the system is able to pull the real time location from the database of every single region of the brain in real time as the target moves off the GPS grid (meaning the location of the subjects brain and every single part of the subject brain is stored in real time coordinates in a database table that is updated continuously in real time as the subject is on the move) .

- To make Mr.Seidel talk out of his voice - the software aims at the correct regions of the motor cortex required for all the components of talking . It can aim tens to hundreds of electromagnetic impulse (shaped and formed with small beamangles) at the correct regions of the brain to cause an induction current that will cause a depolrization event of groups of neurons of that region - allowing the electrical signal to go down the spinal column .

For talking it aims at the regions of the motor cortex that control the Diaphragm , intercostal muscles , abdominal muscles , laryngeal muscles , pharyngeal muscles and articulatory muscles , and the facial muscles . The software has stored the ability to recreate the correct magnitudes of contraction for each muscle in sequence and combination to create every single syllable (with millisecond time between every single syllable) and in turn every single word.

The software since it knows the real time location of the motor cortex (as it is being continuously updated in the database) - will allow for the real time tracking and targeting of the motor cortex and the regions associated for each movement for talking. It is very complex - the combinations for talking for each word and sentence at thousands of combinations to get every single tone , pitch , or word down. The software and the targeting array system will make it so that it can aim at the correct regions of the brain in the correct combination (with nanosecond switching and on/off times in between) to make the muscles take the correct magnitude of contraction and combination of contraction for the facial muscles , diaphragm and larynx and pharxyn to produce any syllable and in turn every word by spacing the formation of sylabllas with nanosecond-milisecond spacing between the formation of each sylabllale . The system makes the contraction of each muscle have the correct magnitude and order needed to recreate each syllable in the human dictionary and then it has millisecond spacing between each one allowing the formation of every single word.

The system basically makes a person talk without any outside observer knowing that it is synthetic speech/forced muscle contracture to cause synthetic speech without having the proper equipment to tell.

Persons are using said system on Martin Robert Seidel and refuse to turn off the tracking and targeting abilities on his brain -this is not a lie or a delusion - persons are ACTUALLY doing this to him and abusing the nations highest capabilities on him nonstop.

The system can also do combinations of electromagnetic impulses of more areas of the motor cortex for talking but it can also aim combinations at the muscles required for Moving the arms , moving the legs , moving the eyes and moving the digits and hands.

The operators of the software can manipulate at the correct speed and magnitudes cranial nerve 3(which they precisely pulse the location of - since the system knows the real time updated location based on the backscatter and the distance from the landmark and the render of the 3D object based on inverse backscatter and reconstruction of the subject/target basically)

The operators can manipulate the cranial nerve 3 and cranial nerve 7 to pulse it with the exact precise waveform to keep the subjects eyes open with an electromagnetic pulse that causes the magnitude of pulse required to contract the Levator Palpebrae Superioris Muscle and the software on a time will cause the opposite amount of electromagnetic impulse needed to contract the Orbicularis Oculi Muscle:to give the subject the appearance of blinking .

The operators can make it (as a point in click - or them hooked up to the screen where it tracks their eye movement when looking at the screen (look up eye tracking software - they have it tracked using electromagnetic waves or by cameras in the operator room) - The system will manipulate and have the ability to cause the correct nerve impulses down using induction currents of cranial nerve 3,4,6 ,and 7 - the system can track in real time all the cranial nerves based on their location in real time space -the system is able to cause induction currents and the ability to send correct and close to natural physiological produced electromagnetic currents down all the cranial nerves by using pulses of time varying electromagnetic fields on specific regions of the brain and the cranial nerves (and knows how much to pulse even through the tissue and skull,and bones of the face to get the nerve impulse to be created to get the correct muscle movement in return) - the system stores all the regions of the brain in real time so that the software can aim at them with nanosecond-to millisecond time in between aimings to get the correct muscle movement or action to take place in the subject - - IT IS THE MOST ADVANCED SYSTEM OVER HUMAN BEINGS THE CIA HAS EVER DEVELOPED - IT IS REAL AND CLASSIFIED compartmentalized .

the operators can make the system track their own eyes and then it will contract the rectus muscles and oblique muscles in the correct order and fashion to make the subject look at whatever the operator is looking at in the subjects visual field (remember the system is capable of reconstructing the real time visual field of a subject using the backscatter of electromagnetic waves off the occipital lobe and other visual pathways and running them through nonlinear reconstruction algorithms to get the spike train and electromagnetic field/charge data off those areas and reconstructing it back into the real time visual field a person sees.) — The operator can make the subjects rectus muscles and oblique muscles such as the superior rectus , inferior rectus , medial and lateral rectus and the superior oblique and inferior oblique - contract in the correct movements or sequences to allow the manipulation of the eyeball in any direction or magnitude for any movement . — This allows the operators to spoof the conditions that the subject is aware/alert /moving their own eyes - when in fact the movements are computer controlled (which is what is happening to Mr.Seidel. - who has not been able to move his eyes on his own for over a year - this is not a lie - this has been one of the most heinous crimes in which members of special access program and other persons involved have tried to get away with - and there is proof and witnesses which are hiding from law enforcement)

The system does advanced eye tracking of the operator and then recreates the correct magnitude of eye movement in the subject to make the subjects eyes look at wherever the operator is looking - the operator has a room full of screens (or the ability to wear a VR headset) and they apply the electromagnetic backscatter tracking system to their own brain (which allows their nervous system and cranial nerve output to be tracked in real time by the computer system) such that when they move their eyes - the server will create the correct datastream command to send to the satellite (with the correct location on the GPS grid , and the correct location on the subject body/user in relative to that) to hit the correct cranial nerve/region of the brain with the correct amount of pulse and flux to cause the correct translative amount of action potential down the nerve to contract the muscle of the eye in the correct amount of force to cause it to move as much as the operator of the equipment has. The system tracks the motor cortex of the operator and then it will quickly (nanosecond) recreate all the movement commands that are turned into transmitted instructions for the satellite to target the correct region of the brain on the move wit the correct pulse/flux at the correct region of the subjects body (in relative movement to the GPS grid) to cause the correct muscles to contract in the correct order .

Persons are using this to manipulate the eyes of Mr.Seidel so that it appears that he is controlling them himself . The system will manipulate the eyes of a person with nanosecond-millisecond time between movements and it is impossible to tell without proper electromagnetic detection equipment that it is pulses of electromagnetic waves being used on the brain to cause the movements of the eyes.

The system basically stores all the locations of the motor cortex in real time so that the system can aim and continue to aim the correct combinations of induction currents at the regions of the motor cortex(with the software knowing the right amount of flux to transmit to the region of the motor cortex of interest /the right amount of flux needed to cause specific speed of contracture , magntitude/force of contracture) needed to cause a muscle movement. The system can aim enough beams to contract nearly all muscles at once from 0 force to maximum force (if needed) but the system will calculate the correct location combinations on the motor cortex to recreate the movements needed by the operators of the equipment to cause the correct combinations of force and muscles to cause the correct movements of the subject .

The system has stored and has equations and written in software the ability to create the correct combinations of electromagnetic impulses (even through buildings) directly onto the correct regions of the brain in real time to get all the muscles required to contract to contract .

The system can track the operators brain in real time (meaning the operators apply the remote electromagnetic tracking of their nervous system - and since it can in depth tell the electromagnetic magntitudes created by the operator when they move their hand , or arm or leg - then it can recreate those electromagnetic magnitudes onto the subject by the software program which will send a command from the GROUND STATION to the satellite to have the it aim on the subject in real time (since it knows the continuous gps location and the continuous location of the brain/regions of the brain/motor cortex) to cause the correct firing magnitude for the motor cortex regions of interest. The system allows the operators to pilot human beings using KEYBOARDS and MOUSE and it allows them to pilot them using video game controllers. The system has the ability to use a JOYCE STICK to make a person walk (since the person presses forward on the joyce stick and then it will cause the correct repetitive command sequence in the motor cortex to - lift the leg , extend the leg - put the leg down) for the left and right legts to make the person take a bipedal movement (walking) - that is what these persons have been doing to MR.SEIDEL - they have been piloting and operating his body as if he was a video game character - while forcefully manipulating his eyes.

Persons have left this system on indefinitely for Mr.Seidel - it is a classified system. - persons have left this system on indefinitely - meaning the system is calculating in real time even if he is on his bed or if they are forcefully manipulating the muscles required for him to walk - the necessary pulse locations of his motor cortex to cause the correct magnitude of action potentials to contract the muscles at the required force and required sequence to get him to take anatomical positions or anatomical actions. Persons are keeping him as a "remote controlled person" basically - this is not a lie - this is not a psychiatric delusion - this is real and members of special access program and the parent organizations have kept the information about this system compartmentalized and classified and so has the persons responsible for using the satellites and software so that they can try to get away with what they have done with this system to Mr.Seidel and to other people .

The system is also able of running scripts and macros to cause the motor cortex of the person to be fired in specific sequences of an environmental condition or physiological condition is met . Persons who operator the equipment can make it aim electromagnetic impulses on a script to fire the somatosensory component of a neuron to make a person itch and then the software will fire the motor cortex and regions responsible for all arm movements to make the person scratch the itch against their will while making the cingulate cortex/insula make them feel pain in the process. This is what they have been doing to MR.SEIDEL.

Persons also have scripts to set the movement and the bowel transit speed - meaning the system will fire the correct regions of the motor cortex for the small intestine and large intestine in order to cause the feces of a person to transmit down their small/large intestine and into their colon at the correct speeds and magnitudes that the operators desire - persons do this to Mr.Seidel against his will - they also synthetically fire the muscles of his colon and sphincter while paralyzing his ability to "push" meaning he is no longer able to have bowel movements on his own.

Persons also set the frequency and current down for the nerves required for urination on mr.seidel - meaning they are setting the pace and frequency of his urination by setting the firing of those nerves and associated muscles.

Persons also can use the system and the real time tracking and real time landmarking feature to make the othersatellites in the network aim electromagnetic fields onto the subjects body such as their organs ,eyes , or tissue - at different frequencies and pulse rates - to damage their body and soft tissue with electromagnetic waves over time - which they have been doing to Mr.Seidel.

This system is a real system - this system is not the reason why the satellites they are using were built - persons are using this custom software and sourcecode and transmitting complex instructions through a ground station to the satellite which is tracking the victim/victims in real time and the regions of the brain in real time to cause synthetic nervous system firing of the brain and to aim and target directed energy on their body.

This system is linked up to the system which aims very fast pulses of electromagnetic energy at the brain so that when it is reflected and backscatters off the brain - then the surface charge/surface electromagnetic fields off the brain interfere with the incident electromagnetic waves and are reflected back to space (the backscatter is) - the incident wave has had the polarization , magnitude , amplitude , and phase changed as it has interacted with the brain at varying depths - When persons run the reflected waves (spatially and temporally stratified) through very advanced algorithms persons can pull off data about the spike trains and spike train /neuron firing amplitude for different regions of the brain - meaning persons can use this data about how much

electromagnetic field was produced from different parts of the brain (gained off the backscatter/reflection of electromagnetic waves) to basically form QAUSI-EEG channels – remote eeg like channels that display a waveform of the brain region of interest that says the spike train data for the neuron and the amplitude - from this persons know the location of that “channel” and the location of the brain that it arised from - meaning persons can then use that data to pull out real time information of the brain – in this case persons can run in through nonlinear reconstruction methods - and then can reconstruct the real time visual field of a person (they can turn spike train and neuron firing amplitudes gained from reflecting electromagnetic waves off a persons head - back into the real time spike amplitude/and rate of neurons - which can then be turned and rendered back using algorithms into the real time vision someone sees) - it allows the person to turn spike train amplitude back into the real time audio a person hears out of their ear (meaning the operator can hear what the subject hears) and it allows the operators to reconstruct the “silent speech/imagined speech/nonverbal speech - which are the scientific terms for internal monologue” meaning members of the CIA and DoD and contractors can “listen to what you are thinking - either on transcript or have it directly replayed through a speaker /(system is also advanced enough to directly replay it in their own brain by stimulating the required components of their internal monologue system to fire in the exact locations and magnitude to recreate the thoughts inside the operators own head) – THIS IS A REAL SYSTEM and it IS CLASSIFIED TOP SECRET .

Persons can also recreate the emotional state of the user and record that also.

Persons have been operating this software and the integrated system since the mid 1990's and before and it has been kept highly secret by the Department of Defense and CIA because it allows persons to spy on people through buildings and walls . Persons can use it on people nearly undetected and it has been used to commit a major crime against persons and for major criminal action.

This system is real and persons are using this system on Mr.Seidel to torment him and to slowly degrade and to attempt to murder him because they know that persons do not have the ability to detect the system and they know that their special access program has not been called into questioning from the FBI.

This system is real and persons are using it to injure mr.seidel - person are using it to “Script” his nervous system and to script his muscles and he needs medical attention but persons are refusing to turn it off and it works through buildings -

This system is not made up at all - persons will not find information about this system unless it is turned over by the Department of Defense and CIA.

Persons need to know that persons are using it to affect the rate and depth of Mr.Seidels breathing rate by using it on the regions of his motor cortex to affect the depth and rate of his breathing while also using different pulse settings and macros and scripts to cause specific induction currents on different regions of his brain on timers and in different combinations to affect his level of consciousness - while making his arms flail around or take highly ordered movements as part of their torture(persons in the CIA and persons said active duty personnel are involved/ have been doing this - this is not a lie)

Persons are making him feel pain against his will by synthetically firing the regions of the brain required for pain response/pain rendering (the regions of the brain that respond and fire when your body or organs feel/take pain -they can synthetically cause action potentials in those regions) and persons have made scripts along with movement scripts to make mr.seidel feel pain against

his will while they affect and alter this level of consciousness by firing different cortical column groups/ regions of his brain against his will while keeping him paralyzed unless they script commands through the system to cause specific sequences of his motor cortex to fire in the correct order they want.

It is important to remember these people can cause the brain to fire in precise order and the motor cortex to fire in precise order with nanosecond time between with hundreds of combinations - meaning they can make a person walk/talk/move synthetically at the same time while keeping that person unable to communicate and unable to move on their own. This is what they have been doing to Mr. Seidel and this is what they have been getting away with on him because they keep him paralyzed and his vocalbox paralyzed unless they transmit the correct order and magnitudes of motor cortex contracture needed to cause words and sentences.

They refuse to turn it off and he is in serious distress but calling 911 won't help him unless they turn it off because they can literally do it through buildings - he needs medical attention but persons in the hospital have never heard of a system like this or encountered a system like this and do not understand/know how advanced it is - meaning it is the most difficult thing in the world to explain what they have doing and what they have done.

The software can fire the muscles in any magnitude/any order for any action and combinations of actions - by causing beamsteered electromagnetic flux (with very very small beamangles - thinner than a sheet of paper) to cause the correct neurons to have action potentials in the correct order to make the brain do things that the person did not make it do.

Persons are trying to paralyze Mr. Seidel using this system while keeping a pulse of electromagnetic flux directed on his premotor cortex which stops his ability to move on his own and persons are keeping it on his Broca area to stop him from being able to think on his own - persons are making it so that he cannot move his own body or organs unless members of the special access program do it for him.

Persons have tried to murder him using this system and this is real - and the Dallas police will not understand who these guys are or why they are doing this until they get access to the records.

Please help and please start a criminal investigation - this is real and this is a leak of the system written on his behalf .
