Persons in a special access program have planned and are planning to use long range electromagnetic capabilities on Attorney General Garland to affect his health . Persons are planning it to stay out of trouble and want revenge for the legal troubles of other high profile people . Persons are in a special access program and have access to advanced directed energy technology that can track a person on the move - even in the car or a plane at real time . It can be used to aim at their brain . Persons admitted this and has plans since 2022 to do something . Persons have access to the most sophisticated neurological and directed energy capabilities at DoD and CIA and of contractors .

There is proof of these allegations in the real time reconstruction of silent speech/imagined speech / internal monologue which can be accomplished by aiming emf at the head and using nonlinear reconstruction algorithms to do remote eeg-like capabilities at ultra long range (it is one of nations most advanced spying techniques and it is top secret - not a lie or fabrication) . Persons said multiple times (and multiple sets of people) they have affected the A.G.

Persons are in communication by a system which can create synthetic internal monologue on a subject from ultra long range . DOJ does not understand this technology - neither does the FBI - but these are real technologies and real allegations .

Persons want to affect the health and mood of the attorney general - persons also said they synthetically fired his visual cortex when he slept to stimulate images in his head .

This technology can go through buildings and walls and can hit a person anywhere in the USA . It uses a constellation of satellites and towers . It is dod and cia system - it is real (this is not science fiction) - the system and constellations have been in place since the 1990s with development starting before that .

The persons who operate the system have free reign of the system at present (even if DoD/CIA denies) and can still win it - and hit whoever they want and do whatever they want still basically .

They are using it to injure people and elected officials and staff and plot terrorism (this is not a lie) . These persons have a direct energy capabilities planned to use on the A.G. and neurological psyops they indicated .

Doj and Marshall's really don't understand what this tech can do or what it has been used for .

Persons with this tech are acting like white nationalist extremists and thugs - not a lie

They are using it however they want to injure and psyop people and use the synthetic internal monologue system to have secret meetings between parties (basically)

Real capabilities and real situation- not a lie - not psychiatric - Marshall's do not have access to the
information about the top secret capabilities- WHICH DO EXIST- and Marshall's do not have access
to the records , technical documents or the conversations or to the names of the persons doing this
and threatening to do this
-  You 2023/8/25 3:55 AM
Persons say Marshall's won't beleieve but it's true persons have :

The system is capable of doing similar to a remote EEG/MEG type analysis on the brain remotely by passing electromagnetic waves through the brain and utilizing the backscatter(it is advanced but provides information for remote analysis) along with advanced signals processing techniques to record and process real time electromagnetic data off the brain that is signal and temporally stratified . Meaning persons can see some the real time electromagnetic data comming off the brain and the turn it back into data that is usable . - the system aims using a landmarking feature - meaning the backscatter of a landmark are using by the system to allow the other electromagnetic waves to be aimed at the correct portion of the brain on the move .

The data can be ran through a series of neural networks and signal processing algorithms and the brain waves from the occipital lobe can be turned back into the real time vision a person sees , the brain waves from the auditory cortex can be turned back into the real time sound a person hears , and the brain waves from the centers for internal monologue can be turned back into the real time

thoughts a person hears - this is the nations most advanced spying technique and it classified top secret

Which can be used to listen to real time monologue- then persons can transmit to brain using the complex brain mapping which is top secret by the special access program - using constellation's of satellites (real)

So the ventrolateral prefrontal cortex and the superior temporal gyrus have been precisely mapped by undisclosed special access program. this program has a phased array capable of directing electromagnetic flux toward a subject's brain long range (hundreds of km) pinpoint accuracy

Individuals in the special access program are equipped with detailed knowledge of the ventrolateral prefrontal cortex and the superior temporal gyrus and IFG. enables them to aim and induce specific electrical currents by pulsing and modulating precise beam patterns and waveforms at targeted areas within these brain regions. Allows them create an artificial internal monologue/sound

They can modulate the primary auditory cortex, the delta area, and/or the superior temporal gyrus. By inducing currents in the appropriate regions of the ventrolateral prefrontal cortex and the superior temporal gyrus, they can manipulate the pitch, volume, and timbre of perceived sounds

"landmarking " feature - it calculates the distance to the brain region of interest from a landmark on the users body -- meaning that the system tracks the return of the emf off the landmark and has the distances to the brain region of interest (i.e the motor cortex , or the auditory cortex , or any other region of the brain of interest) programmed into the source code -- so that emf waves can be aimed onto the regions of interest in real time without missing. This emf waves that are aimed at the brain to cause neurological effect are controlled by precise algorithms and computer software and have had features of the electromagnetic wave altered such as the - amplitude , frequency , polarization , waveform shape, beam direction, waveform duration and other advanced features modulated to produce the desired emf effects (and induction magnitudes on the correct region of the brain to produce the desired synthetic neuron firing in complex patterns to communicate

It is just the Left inferior frontal gyrus (IFG) being synthetically fired in a precise and magnitude and location controlled manner . The system can track that part of the brain on the move(explained how it does it to ncis and fbi) - it is real - do not dismiss. Urgent

The system has akin to a "key" which is the ability to transmit audio to the brain off a prerecording - meaning it has the necessary locations , pulse power, pulse rate , pulse width , and other features of the electromagnetic waves necessary to recreate the syllabales and thus the word and sentences for a message - that can be transmitted to the brain

The "key" would be a software package with the corespeonding calculations needed on the specific region/regions of the brain needed to recreate a word/sentence - meaning it has the proper features of the electromagnetic waves (in reality it has the proper equations for calculating the correct features of the electromagnetic waves in real time stored) -- needed to produce the correct induction current in the groups of neurons and cortical columns (of the correct brain region)

needed to produce speech inside the internal monologue

By pulsing and manipulating the correct beamsterred beams and waveforms, these individuals can induce currents and alter the neural activity in the designated areas of the ventrolateral prefrontal cortex and the superior temporal gyrus. This modulation leads to the creation of synthetic internal monologues and thoughts within the affected individuals. Additionally, it seems that they have the capability to modulate the primary auditory cortex, the delta area, and/or the superior temporal gyrus to modify aspects such as pitch, volume, and timbre. This manipulation, when combined with the induction currents in the relevant regions of the ventrolateral prefrontal cortex and the superior temporal gyrus,

Persons use the remote eeg and the transmit ability to have conversations and to transmit and create synthetic internal monologue- allowing clandestine conversations- persons use the system to plan things and also to talk or to harass and torture people - the system was first developed to communicate with assets in the field in secret (persons said) - it is a real system and very compartmentalized

Persons have been talking on and off and this morning and last night about "fucking with " attorney general garland at his house and injuring his organs - not a lie - persons are using slurs basically which is recorded on the internal monologue creation system records to reference him - persons said they can aim and will - aim constructive interference electromagnetic waves at his small intestine to micro scar it and to damage his nutrient absorption over time .

These guys are active duty military and contractors

They have access to a satellites constellation which can use electromagnetic capabilities and then receive the backscatter (via different satellites) to run in house algorithms to get real time data and also allows real time aiming on the move , and the system can aim different frequencies at the organs , brain and body on the move of a person - they have used it on Garland and program members would testify to that on court and in deposition

2023/8/27 4:38 PM

Persons know where his house is in Bethesda and are going to turn on the emf lock on him . Only they have access to the software to show we're it is aimed - by their own admission

They are plotting it and plotted it the past couple of days

Persons say they are going to use emf on his brain and keep it locked even if he is on the move

You

2023/8/27 9:59 PM

Persons directly said they "want to give the attorney general health problems later in life because he is a treasonous fucking cunt " which is in reference to his decision in high profile cases

Persons directly said this - it is recorded on an intranet , persons have conversations recorded from the synthetic internal monologue system - the program has been running for a long time - persons have data from the quasi remote -eeg like capabilities that are being concealed and they indicated they are not going to turn it over .

Persons indicated persons are using the system at discretionary will - and persons will try to obfuscate that fact . Persons are using the systems as they please still (we presume) and are

making threats .

The FBI needs to get access to the remote-eeeg like data - it can be played back in real time and shows the conversations - there is also a transcript software that can turn the synthetic internal monologue system conversations into transcript

You

2023/8/27 10:06 PM

Persons indicated they may have data about the attorney general gathered illegally - such as the classified backscatter of electromagnetic waves that have bounced off his brain and been reflected - persons can turn this back into real time visual field , real time auditory field , real time subvocal speech /internal monologue- persons can collect this off a person without them knowing - they may have also cloned his phone and computer without his knowledge and consent using their network and windows 11 and phone cloning tools

Persons would have done this while injuring him and planning to injure him - which they directly admitted

Persons also have the neurological data about other persons kept on an intranet
